Preface	xiii
Foreword	xvii

Part 1: Introduction

1 About this Book	1
1.1 Why Make Your Own Telescope?	1
1.2 What Use Is a Telescope?	2
1.3 The Instruments Described in this Book	3
1.3.1 A Beginner's Telescope	3
1.3.2 The Standard Amateur Astronomer's Telescope	3
1.3.3 The Telescope for the Experienced Amateur	4
2 From Galileo to Hubble: A Short History of the Telescope	5
2.1 The Pioneers of Astronomical Optics	5
2.2 The Race for More Powerful Instruments	9
2.3 Modern Instruments	12
2.4 The Instruments of the Next Generation	13
2.5 The Evolution of Amateur Astronomers' Instruments	13
3 How Telescopes Work	17
3.1 Refractors and Reflectors	17
3.2 Parts of the Telescope	17
3.2.1 The Mirrors	17
3.2.2 The Optical Tube Assembly	18
3.2.3 The Mount	19
3.2.4 The Telescope Clock Drive	19
3.3 Accessories	21
3.3.1 Eyepieces	21
3.3.1.1 Choosing an Eyepiece	21
3.3.1.2 Eyepiece Prices	23
3.3.2 The Barlow Lens	24
3.3.3 Focal Reducers	25
3.3.4 Field Correctors	25
3.3.5 Finder Scope	26

3.4	Important Concepts	27
3.4.1	The Resolving Power of an Instrument	27
3.4.2	How the Eye Works	28
3.4.3	The Role of the Eye in the Determination of Magnification	29
3.4.4	Calculating a Telescope's Limiting Magnitude	31
4	Telescope Making Basics	33
4.1	Choosing a Telescope	33
4.1.1	Your Motivation	33
4.1.2	Your Resources	34
4.1.3	Your Budget	34
4.1.4	Optical Characteristics	35
4.1.5	Mechanical Characteristics	37
4.1.5.1	Choosing a Mount	37
4.1.5.2	Choosing a Tube	37
4.2	Steps in Construction	37
4.2.1	Making the Optical Components	38
4.2.1.1	The Primary Mirror	38
4.2.1.2	Secondary Mirrors	39
4.2.1.3	The Telescope Window (for the 300-mm Telescope)	39
4.2.2	Making the Mechanical Parts of the Telescope	40
4.2.2.1	The Optical Tube Assembly	40
4.2.2.2	The Mounting	40
4.3	Preparing Your Workshop and Selecting Materials	40
4.3.1	Lay Out a Workshop	40
4.3.2	Making a Polishing Stand	41
4.3.3	Make a Mirror Case	42
4.3.4	Select the Abrasives	43
4.3.4.1	Grinding and Smoothing Abrasives	43
4.3.4.2	Polishing Compounds	43
4.3.5	Glass Choice for Mirror Blanks	45
4.3.6	Preparing the Glass for Rough Grinding	45
4.3.6.1	Chamfering	45
4.3.6.2	Preparing the Backs of the Mirror and Tool	46
5	Mirror Testing Methods	49
5.1	Finding the Sagitta of a Mirror with Feeler Gauges	49
5.2	Measuring the Curvature of a Mirror with a Spherometer	50
5.3	Testing a Smoothed Surface with a Loupe	51
5.4	The Foucault Test	52
5.4.1	What Does the Foucault Test Do?	52
5.4.2	How Does the Foucault Test Work?	52
5.4.3	Spherical Mirrors	54
5.4.4	A Mirror with a Defective Radius of Curvature	54
5.4.5	Paraboloidal Mirrors	57

5.4.6 The Couder Screen	61
5.4.6.1 Making the Test Screen	63
5.4.7 The Foucault Test in Practice	63
5.4.8 How to Interpret the Measurements	64
5.4.8.1 Calculating the Largest Defect on the Reflected Wavefront	69
5.4.9 When is the Mirror Finished?	72
5.5 Fringe Testing Flat Mirrors	73
5.5.1 Some Physical Optics	74
5.6 Testing the Surface Quality of a Polished Mirror	75
5.6.1 How Do Defects Affect Image Quality?	80
5.6.2 Photographing Surface Defects with the Foucault Tester	80

Part 2: A 130-mm *f*/9.2 Newtonian Telescope

6 Optical Specifications for the 130 mm <i>f</i>/9.2 Newtonian	85
6.1 Optical Characteristics and Theoretical Performance	85
6.1.1 Optical Characteristics	85
6.1.2 Theoretical Performance of the Telescope	85
6.1.3 Magnifications to Use with this Instrument	86
6.2 Tolerances for Mirror Making	86
6.2.1 Primary Mirror	86
6.2.2 Secondary Mirror	87
6.3 The Dimensions of the Secondary Mirror	88
7 Making the Primary Mirror	89
7.1 Using Abrasives	89
7.1.1 From Rough Grinding to Smoothing	89
7.1.2 To Polishing	90
7.2 Rough Grinding	90
7.2.1 Strokes for Rough Grinding	90
7.2.2 Finding the Sagitta during Rough Grinding	92
7.3 Fine Grinding	92
7.3.1 Strokes for Fine Grinding	93
7.3.2 Finishing Fine Grinding	95
7.4 Smoothing	96
7.4.1 Smoothing Strokes	97
7.4.2 Precautions for Smoothing	97
7.4.3 When to Change Abrasive Grains during Smoothing	98
7.4.4 Duration of Smoothing	99
7.4.5 How to Change the Radius of Curvature during Smoothing	100
7.4.6 The Last Wet before Polishing	100
7.5 Polishing	100
7.5.1 Making the Pitch Lap	102
7.5.2 Beginning Polishing	104
7.5.3 Polishing Out a “Gray” Surface	106

8	Testing and Finishing the Primary Mirror	109
8.1	Making a Foucault Tester	109
8.1.1	Principle	109
8.1.2	Lighting	109
8.1.3	Dimensions of the Light Slit	112
8.1.4	Making the Knife-Edge and the Slit	112
8.1.5	Parallelism of the Knife-Edge and the Slit	113
8.2	Testing the Mirror during Polishing	113
8.2.1	Setting Up	114
8.2.2	Positioning the Foucault Tester	114
8.2.3	What You Should See	115
8.3	Retouching during Polishing	116
8.4	When is the Mirror Finished?	119
8.5	Sending the Mirrors to be Aluminized	120
8.5.1	Reflective Coating Basics	120
8.5.2	Choosing a Coating	120
8.5.3	Arranging the Details for Your Reflective Coating	121
8.5.4	Cleaning the Mirror Before Shipment to the Aluminizer	122
8.5.5	Packaging the Mirror for Shipping	124
8.5.6	Checking the Reflective Coating	124
9	Making the Secondary Mirror for a 130-mm <i>f</i>/9.2 Newtonian	125
9.1	Bill of Materials and Organization of the Work	125
9.2	Cutting the Diagonal Mirror Shapes	126
9.2.1	Cutting out a Rectangular Mirror	126
9.2.2	Cutting Out an Octagonal Mirror	127
9.3	Blocking the Diagonal Mirror Blank	127
9.4	Smoothing the Diagonal	129
9.4.1	The Three-Disk Method	129
9.4.2	Testing the Flat Mirror During Smoothing	131
9.4.3	Testing for Flatness at the End of Smoothing	132
9.5	Polishing the Flat Mirror	132
9.6	Testing and Retouching the Flat Mirror	133
9.6.1	Testing	133
9.6.2	Retouching during Polishing	133
9.7	Removing the Mirror from the Block	134
9.8	Retouching of the Flat Mirror after Removal	134
10	Making the Tube and Optical Component Supports	137
10.1	The Octagonal Tube	137
10.1.1	Making the Octagon Tube	137
10.2	The Primary Mirror Cell	139
10.3	The Spider and the Secondary Mirror Support	139
10.4	The Focusing Mount	142
10.5	Side Bearings	142

11 Making the Mounting	143
11.1 Plans for the Mount	143
11.2 Mounting the Telescope	145
 Part 3: A 250-mm $f/4.3$ Newtonian	
12 The 250-mm $f/4.3$ Newtonian Mirror	149
12.1 Optical Characteristics	149
12.2 Theoretical Performance	149
12.3 Magnification	150
12.4 Mirror-Making Tolerances	150
12.4.1 Tolerancing the Primary Mirror	150
12.4.2 Tolerancing the Secondary Mirror	151
13 Making the 250-mm $f/4.3$ Primary Mirror	153
13.1 Rough Grinding, Fine Grinding, and Smoothing	153
13.1.1 Rough Grinding	153
13.1.2 Fine Grinding and Smoothing	153
13.2 Polishing	157
13.2.1 Making the Pitch Lap Polisher	157
13.2.1.1 Drawing the Outline of the Facets on the Tool	157
13.2.1.2 Preparing the Mold for the Pitch Squares	157
13.2.1.3 Preparing the Pitch	157
13.2.1.4 Pouring the Pitch, Making the Facets	158
13.2.1.5 Attaching the Pitch Facets	158
13.2.1.6 Pressing the Polishing Tool	159
13.2.1.7 Trimming the Tool	160
13.2.1.8 Pressing before Polishing	160
13.2.2 Beginning Polishing	160
13.3 Parabolizing the Mirror	162
13.3.1 Parabolizing from the Center	163
13.3.2 Parabolizing at the Edge	164
13.3.3 Parabolizing at the Center and the Edge	164
13.4 General Remarks on Pitch Polishing	164
14 Testing and Finishing the 250-mm $f/4.3$ Newtonian Mirror	169
14.1 Testing with the Foucault Apparatus	169
14.2 Measurement Procedures	169
14.3 Retouching the Parabola	170
15 Making The Secondary Mirror for a 250-mm $f/4.3$ Newtonian Telescope	177
15.1 Cutting an Octagonal Mirror	177
15.2 Cutting an Elliptical Mirror	177
16 Mechanical Parts for the 250-mm $f/4.3$ Newtonian Telescope	179
16.1 The Optical Tube Assembly	179

16.2	The Fork	183
16.3	The Base	183
16.4	Mounting the Telescope	185
17	A Clock Drive	189
17.1	The Motor	192
17.2	The “Smooth Sector”	193
17.3	The Screw-Tractor-Nut Assembly	193
17.4	Maintenance of the Mounting	194
18	Electronic Corrector	195
18.1	Introduction	195
18.2	Circuit Overview	196
Part 4 A 300-mm $f/12$ Cassegrain-Coudé Telescope		
19	Optical Specifications	205
19.1	Optical Characteristics and Theoretical Performance	205
19.1.1	Optical Specifications	205
19.1.2	Theoretical Performance of the Telescope	207
19.2	Fabrication Tolerances	208
19.2.1	The Primary Mirror	208
19.2.2	The Secondary Mirror	208
19.2.3	The Coudé Flat	208
19.2.4	The Optical Window	208
19.3	Choosing the Materials	209
20	Making a Zero-Magnification Finder	211
21	Making the Primary Mirror	213
21.1	Perforating the Mirror and Putting the Cutout in Place	213
21.1.1	Why Perforate the Mirror before Grinding?	213
21.1.2	Perforating the Mirror	213
21.1.3	Reattaching the “Biscuit”	215
21.2	Rough Grinding, Fine Grinding, and Smoothing	216
21.3	Removing the Biscuit after Smoothing	216
21.4	Polishing	216
21.4.1	Making the Polishing Tool	217
21.4.2	Beginning Polishing	217
21.4.3	Parabolizing the Mirror	218
22	Testing the Primary Mirror	221
22.1	Foucault Test	221
22.1.1	Retouching the Parabola	221
22.1.2	Why the Caustic Test?	222
22.2	The Caustic Test	223
22.2.1	Principles of the Caustic Test	223

22.2.2	Adapting the Foucault Tester for the Caustic Test	224
22.2.3	Making a Test Mask	225
22.3	Performing the Caustic Test	225
22.3.1	Alignment	225
22.3.2	Procedure	226
22.3.3	Interpreting the Measurements	227
23	Testing for Astigmatism	231
23.1	What is Astigmatism?	231
23.2	How to Detect and Measure Astigmatism	232
23.2.1	Using the Artificial Star Test	232
23.2.2	Observations in the Artificial Star Test	232
23.2.3	Measurement and Correction	233
23.3	The Wire Test	233
23.3.1	Using the Wire Test	233
23.3.2	What You Should See	235
23.3.3	Measurement and Interpretation	236
23.4	How to Retouch an Astigmatic Mirror	236
23.4.1	Using a Sub-diameter Lap	236
23.4.2	Using a Full-Size Tool	237
24	Making the Convex Secondary Mirror	239
24.1	Procedure	239
24.1.1	From Rough Grinding to Smoothing	239
24.1.2	Polishing the Back of the Tool and Mirror	240
24.1.3	Polishing the Mirror and the Reference Disk	240
24.1.4	Beginning Polishing	241
24.1.5	Making the Reference Disk Spherical	242
24.1.6	Hyperbolizing the Convex Mirror	242
25	Making the Telescope Window	245
25.1	Why Make a Telescope Window?	245
25.2	Perforating and Edging the Telescope Window	245
25.3	Smoothing the Faces	245
25.3.1	Preparing the Tool	245
25.3.2	Testing the Parallelism of the Faces	246
25.3.3	Smoothing	246
25.3.4	Testing the Flatness of the Smoothed Faces	246
25.3.5	Finish Smoothing	247
25.4	Polishing the Faces	247
25.4.1	Semi-polishing the First Face	248
25.4.2	Polishing the Second Face	248
25.4.3	Testing for Flatness	248
25.4.4	Finishing the First Face and Foucault Testing	248
25.4.5	Interpreting the Results of the Foucault Test	250

26 The Optical Tube Assembly and Mounting 253

Part 5: Use and Care of Your Telescope

27 How to Use Your Telescope 261

27.1 Aligning the Optics 261
27.1.1 Aligning a Newtonian Telescope 261
27.1.1.1 Preliminary Alignment 261
27.1.1.2 Fine-Tuning the Alignment 262
27.1.2 Aligning a Cassegrain Telescope 262
27.2 Polar-Aligning an Equatorial Telescope 263
27.2.1 Step One: Quick Alignment 263
27.2.2 Step Two: Aligning on the Meridian 264
27.2.3 Step Three: Latitude Adjustment 264
27.3 Observing 264
27.4 Sketching at the Eyepiece 266
27.5 Astrophotography 269
27.5.1 Deep-Sky Photography 269
27.5.2 Planetary Photography 271
27.6 Reducing Turbulence 272
27.7 Eliminating Vibrations 273

28 Evaluating and Improving Your Instrument 275

28.1 Observing the Diffraction Disk 275
28.2 The Foucault Null Test on a Star 277
28.2.1 Building the Foucault Camera 280
28.2.1.1 Parts of the Foucault Camera 280
28.2.2 Alignment 284
28.3 Cleaning Your Telescope's Mirrors 284
28.3.1 Procedure 285
28.3.2 Durability of Optical Coatings 286

**Appendix A Clubs and Associations/Annual Conferences
on Telescope Making 287**

A.1 Conferences and Star Parties 287
A.2 Clubs and Associations 287

Appendix B Suppliers 289
