

Table of Contents

Preface Why Do Astrophotography?	xi
Foreword	xvi
Acknowledgements	xviii
Chapter 1 Entering the Digital Realm	1
1.1 Introduction	1
1.2 Is Digital Good Enough for Astrophotography?	3
1.3 Is Digital Astrophotography Hard to Master?	5
1.4 The Digital Advantage	10
1.5 Comparing Digital and Film Cameras	12
1.6 Expectations	14
1.7 For Instant Gratification, Shoot the Moon	17
1.8 Improving Your Moon Shots	18
Chapter 2 Digital Imaging Using a Webcam	25
2.1 Introduction	25
2.2 Basic Equipment for Webcam Imaging	27
2.3 Setting Up for a Webcam Imaging Session	29
2.4 Using a Webcam for Astrophotography	31
2.5 Image Processing Using RegiStax	40
Chapter 3 The Differences Between Film and Digital Cameras...	49
3.1 Introduction	49
3.2 How Digital Cameras Work	50
3.3 Noise	52
3.3.1 Random Noise	53
3.3.2 Non-Random Noise	56
3.4 Image Sensors	57
3.5 Sensors Are an Evolving Technology	58
3.6 Color	60
3.6.1 Tri-color Filters	60
3.6.2 RGB Bayer Pattern Filters	61
3.6.3 Foveon Sensors	62
3.7 Sensitivity	63
3.8 Resolution	65
3.9 Fill Factor and Microlenses	65

iv Table of Contents

3.10	Sensor Size, Aspect Ratio and Perspective	66
3.11	Four-Thirds System to Standardize DSLR Cameras	68
3.12	Film and Digital Sensors Record Light Differently	70
3.13	Effective Number of Pixels versus Actual Pixels	72
3.14	Interpolated Pixels	73
3.15	AD Converter	73
3.16	Image Buffer	74
3.17	Image Transfer Speed	75
3.18	White Balance	75
3.19	Shutter Lag	76
3.20	LCD Preview Screen	77
3.21	Is It Time to Go Digital?	78
Chapter 4 Digital Astrophotography’s Special Considerations . . .		81
4.1	Care of Digital Cameras	81
4.2	Dust and Dirt on the Imaging Sensor	82
4.3	The Recording Medium Never Changes	87
4.4	Overcoming Heat in Digital Cameras	87
4.5	Hot, Stuck and Dead Pixels	90
4.6	Dealing with Afocal Vignetting	93
4.7	Predicting Vignetting	95
4.8	Fixed-Lens Camera Limitations	97
4.9	Digital Camera Viewfinder Limitations	98
4.10	DSLR “Crop Factor” and Lens Focal Length	99
4.11	Electrical Power Requirements	100
4.12	Limited Red Spectral Response	101
Chapter 5 Types of Astrophotography		109
5.1	Introduction	109
5.2	Fixed-tripod Imaging Introduces the Camera to the Sky	110
5.3	Piggyback Adds Tracking Capability	115
5.4	Prime Focus Enables Deep-Sky Imaging	121
5.5	Eyepiece Projection for Lunar and Planetary Close-ups	132
5.6	Afocal Photography Allows Use of Fixed-Lens Cameras	135
5.7	Barn Door Star Tracker Photography	144
Chapter 6 What Camera to Choose?		145
6.1	Desirable Features in a Digital Astrocamera	146
6.1.1	Fixed-Lens Point-and-Shoot Cameras	146
6.1.2	Digital SLR Cameras	149
6.2	Vast Selection of Digital Models Available	150
6.3	Fixed-Lens Cameras	151
6.4	Interchangeable Lens DSLR Cameras	153
6.4.1	Canon	154
6.4.2	Nikon	155
6.4.3	Olympus	157

Chapter 7 Camera Lenses for Astrophotography	159
7.1 The Ideal Lens for Astrophotography	159
7.2 The Evolution of Camera Lenses	160
7.3 A Camera Lens Primer	161
7.3.1 Several Factors Govern Attainable Star Magnitudes	164
7.3.2 Focal Ratio Governs Sky Fog and Dim Nebulae	165
7.4 Lens Considerations for Digital Cameras	166
7.5 Digital-Friendly Lenses	168
7.6 Zoom Lenses the Standard for DSLR Cameras	173
7.7 Dealing with Common Lens Defects	174
7.8 Other Optical Limitations	177
7.9 Testing a Lens for Astrophotography	178
7.9.1 Variations in Focus	180
7.10 Finding Precise Focus	181
7.11 Focal Reducers and Teleconverters for Digital Lenses	184
7.12 Cleaning Lenses	185
Chapter 8 Accessories for Astrophotography	187
8.1 Telescope Covers Reduce Heat	187
8.2 A Ground Cover Tarp Saves Frustration	187
8.3 Photo Tripods	187
8.4 Lens Shades Necessary for Piggyback Photography	188
8.5 Afocal-Projection Couplers	188
8.6 Remote Shutter Releases	195
8.7 Power Supplies in the Field	196
8.8 High Capacity, Lead Acid Battery Types	196
8.8.1 Rating a High Capacity, Lead Acid Battery	197
8.8.2 Charging a High Capacity, Lead Acid Battery	198
8.8.3 Battery Safety Issues	199
8.9 Gel Cell Batteries	199
8.10 Other Battery Notes	201
8.11 Nicad Batteries	201
8.12 Nickel Metal Hydride Batteries	202
8.13 Lithium-Ion Batteries	203
8.14 Power Inverters	203
8.15 Foreign Country Line Converters	205
8.16 Flashlights	205
8.17 Accessory Carrying Cases	206
8.18 Laptop Computers for Astrophotography	206
8.19 Flat-Panel Computer Monitors	210
8.20 Software for Planning an Observing Session	211
8.21 Memory Card Reader	211
8.22 Applying Digital Techniques to Old Film Astrophotos	212
8.23 Odds and Ends	213

Chapter 9 Polar Alignment and Guiding	219
9.1 Principles of Polar Alignment.	219
9.2 Telescope Mechanical Checks	220
9.3 Basic Polar Alignment	221
9.4 Other Factors in Polar Alignment	223
9.5 Star-drift Polar Alignment	224
9.6 Star-drift Alignment Variations	225
9.7 Guiding Corrects Alignment Errors	226
9.8 Causes of Guiding Errors	227
9.9 Dealing with Tracking Problems	229
9.10 Choosing a Guidescope.	231
9.11 Off-Axis Guider	232
9.12 Illuminated Reticle Eyepieces.	233
9.13 Manual Guiding Tips	236
9.14 Manual Guiding Techniques.	236
9.15 Guiding Tolerances.	238
9.16 Electronic Autoguiders	240
9.16.1 Setting Up a Typical Autoguiders	242
9.16.2 STV: The Next Generation Autoguiders	243
Chapter 10 Using a Digital Camera for Astrophotography	245
10.1 Introduction.	245
10.2 Built-In Camera Flash.	245
10.3 Lens Focus Setting	246
10.4 ISO Speed Setting	247
10.5 Exposure Setting	248
10.6 Resolution	248
10.7 Optical and Digital Zoom	250
10.8 White Balance Setting.	250
10.9 Black and White Option	252
10.10 Remote Operation	253
10.11 Use of Filters.	253
10.12 Care of Light Pollution Filters	254
10.13 Electronic Image Noise.	255
10.14 Auto Bracketing	257
10.15 Auto Exposure Lock	258
10.16 Memory Card	258
10.17 In-Camera Image Processing	264
10.18 Calculating Image Field Size	265
10.19 Image Storage	266
Chapter 11 Digital Astrophotography Techniques	269
11.1 Focusing Through a Telescope	269
11.2 Focusing a Digital Camera for Astrophotography	270
11.2.1 Focusing a Compact Fixed-Lens Digital Camera.	271

11.2.2 Focusing Digital SLR Cameras	272
11.2.3 Software Based Focusing	273
11.2.4 Knife-Edge Focusers	275
11.3 Solar Photography	278
11.4 Hydrogen-alpha Solar Photography	282
11.5 Lunar and Planetary Photography	285
11.6 Deep-sky Targets	287
11.7 Filters and the Wave Nature of Light	292
11.8 Color Imaging Limits Filter Selection	293
11.9 Hydrogen-alpha Filters Enhance Digital Images	297
11.10 Broadband Light Pollution Rejection Filters	300
11.11 Soft-focus Filters to Enhance Star Sizes	301
11.12 Star Trails	301
11.13 Comet Photography	304
11.14 Meteor Photography	307
11.15 Meteor Photography Techniques	308
11.16 Digital Advantage for Automated Meteor Photography	310
11.17 Asteroid Photography	312
11.18 Lessons Learned at the Telescope	313
Chapter 12 Homemade Accessory Projects	317
12.1 Multiple Outlet 12-Volt Power Supply	317
12.2 Portable 120-Volt Power in the Field	317
12.3 Laptop Case With Built-in Power Supply	320
12.4 Cooling Compact Cameras to Reduce Noise	321
12.5 Cooling DSLR Cameras to Reduce Noise	323
12.6 Easy to Make Stable Telescope Mount	325
12.7 Cable Release Adapter Frame	327
12.8 Small Tracking Platforms	328
12.9 Barn Door Mount Construction Details	330
12.9.1 Suitcase Star Tracker	331
12.10 Hartmann Mask Focusing Aid	333
12.11 Diffraction Focusing Aid	335
12.12 Schmidt-Cassegrain Mirror Lock	336
12.13 Artificial Star for Collimation and Focus Tests	338
Chapter 13 Real World Astrophoto Problems	341
13.1 Atmospheric Turbulence Limits High Resolution	341
13.2 Predicting Seeing and Transparency	344
13.3 Light Pollution	346
13.4 Dewing	347
13.4.1 Dealing with Dew	348
13.5 Mosquito Control	349
13.6 Mosquito Repellants and Traps	349
13.7 Other Nighttime Pests and Critters	351

viii Table of Contents

13.8 Keeping Warm at the Telescope 352

Chapter 14 Image Processing 353

14.1 Introduction 353

14.2 The Laws of Astronomical Image Processing 354

14.3 Don't Overdo Processing 356

14.4 Many Processing Choices, Similar Results 358

14.5 Basic Processing Operations 359

14.6 Getting Organized 361

14.7 Color in Astronomical Images 361

14.8 Monitor and Printer Output 362

14.9 A Must-Have Freeware Program 364

14.10 An Overview of Popular Image Processing Software 364

14.11 Adobe Photoshop 366

14.12 Assembling Digital Star Trails with Photoshop 370

14.13 ImagesPlus 374

 14.13.1 Creating a Master Dark Frame 374

 14.13.2 Image Calibration 374

 14.13.3 Grading Images 377

 14.13.4 Alignment and Stacking 377

 14.13.5 Digital Development 381

14.14 AIP4Win 382

14.15 Conclusion 392

Appendix A Equipment Suppliers and Manufacturers 393

Appendix B Helpful Web Sites 399

Appendix C Contributors' Personal Web Sites 403

Bibliography 405
